Advanced Tools

Processing Modes · https://www.kit-maker.com/docs/km3-advanced-tools/

Two tools in the **Prepare** menu. Most people won't need them.

Sort by Filenames

Prepare > Sort by Filenames makes a copy of a pack on your Desktop, sorted into category folders by filename. Use it when you want to check or adjust the sorting by hand before making kits, then import the sorted copy.

Make Blank Sample Pack Folder

Prepare > Make Blank Sample Pack Folder creates a folder on your Desktop with an empty folder for each category. It's handy for building your own pack from scratch: rename the main folder (for example "Hard Trap Pack"), keep the category folder names, copy your samples in, and import it.
