Filters

Processing Modes · https://kitmakerstage.wpenginepowered.com/docs/km3-filters/

Two filters keep loops and long sounds off your pads. Turn them on or off with the **Large Files** and **Keywords** buttons in the Import panel.

Filter Large Files

On by default. Files of 2 MB or more are skipped, since long sounds rarely belong in a drum kit. Turn the **Large Files** button off to allow them.

Filter Keywords

When the **Keywords** button is on, samples whose folder or filename matches the **Filtered Keywords** list are skipped. The default list catches loops, breaks, demos, stems, construction kits and similar non-one-shot content.

Edit the list in the red field at the bottom of the Edit Categories/Keywords window.

After processing, the Summary Page lists what was filtered from each pack and why.
