FL Studio (FPC)

Kit Formats · https://www.kit-maker.com/docs/km3-fl-studio-fpc/

Kit Maker makes kits for **FPC**, the drum pad sampler that comes with every edition of FL Studio. Each kit is an FPC preset. Pads are colored by category, and every pad gets a matching icon, so a kick pad shows a kick and a snare pad shows a snare (the icon comes from the sample name when Use Icons from Filenames is on).

Where the kits go: Kit Maker saves them in FPC's presets folder inside your Image-Line folder (`FL Studio/Presets/Plugin presets/Generators/FPC`), with the samples saved alongside them. The first time you turn on FL Studio, Kit Maker looks up your Image-Line folder from FL Studio's own settings:

- If your folder is in the usual place (`Documents/Image-Line`), it's set for you.
- If you've moved it, Kit Maker shows you the location it found and uses that.
- If it can't find one, Kit Maker uses `Documents/Image-Line` and tells you. If your Image-Line folder is somewhere else, set it before making kits.

You can change the location at any time in Preferences > Folder Paths, where the row is called **FL Studio (FPC) Image-Line Folder**. It should match the Image-Line data folder set in FL Studio.

FPC color theme and layout: the first time you turn on FL Studio, Kit Maker offers a color theme and pad layout that match the classic FPC kit style. You can change either later. The **FL Studio** theme is in the Color Theme dropdown (see Color Themes), and the **FL Studio** layout is in the Layout dropdown.

Loading a kit:

1. In Kit Maker, choose **FL Studio** and click *Make Kits*.
2. In FL Studio, open the FPC kit browser. The kits are labeled and organized by pack.
3. Choose a kit and it loads with its pad colors and icons.

Banks: FPC has two banks of 16 pads, and Kit Maker can fill both in one preset. Set this with the **Banks** dropdown on the main screen (see Banks).

Novation FLkey: the FLkey keyboards have RGB drum pads. Load an FPC kit and the FLkey's pads light up in the same colors as the kit.
